22 currently active data providers

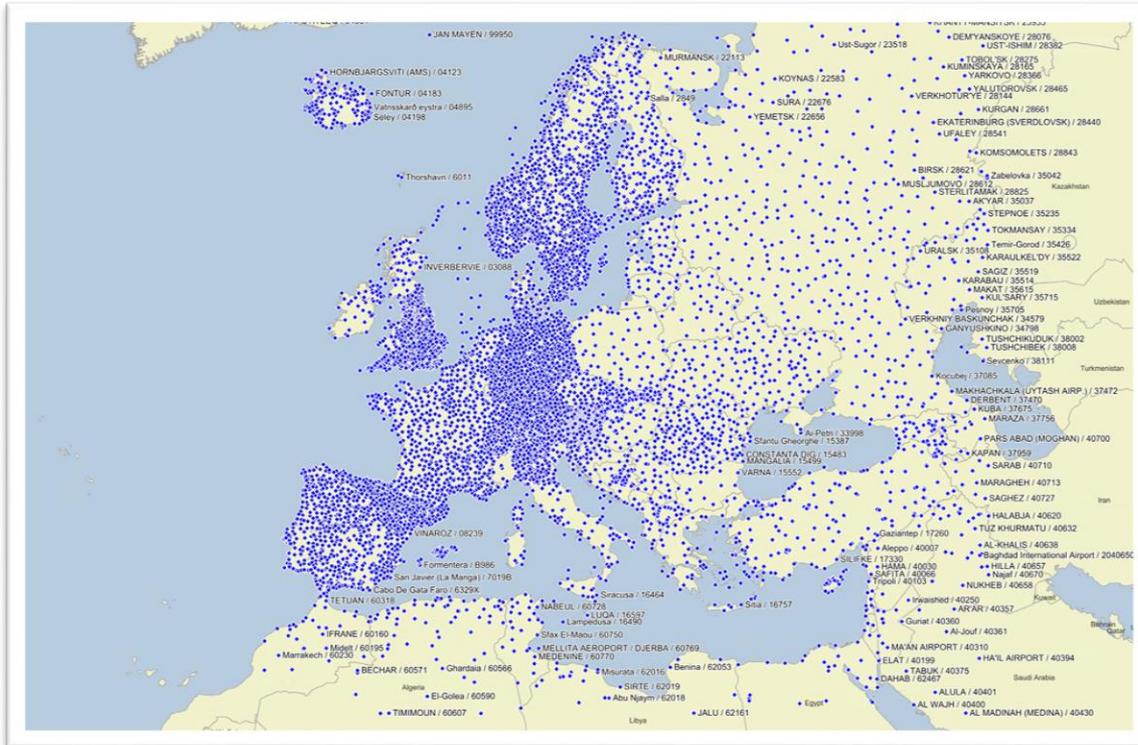

Some statistics – Current situation in the EFAS domain

24 data streams from active data providers	Active stations in EFAS domain
AEMET	750
AMDASynop	829
ARPASIM	135
ARSO	21
CHMI	64
DWDSynop	3728
EA	906
FHMZ	31
FMI	281
IMGW	62
IPMA	97
KHMI	7
KNMI	50
LEPL	19
MARS	4871
METIE	24
MeteoLux	1
MeteoSwiss	159
MeteoSwissCombiPrecip	488 (virtual)
NMI	808
SAIH	384
SHMU	64
SMHI	695
ZAMG	836 (virtual)
Total	15310

11 parameter types	Active stations in EFAS domain	6 daily grids, 8 6-hourly grids + point lists
Cloud cover	4409	
Dew point temperature	6095	
Evaporation	178	
Precipitation	15208	EFAS GRIDS + EFFIS
Relative air humidity	4488	EFFIS
Solar radiation	5295	EFAS GRIDS
Sunshine duration	2970	
Temperature (min/mean/max)	12583	EFAS GRIDS + EFFIS + EDO
Water vapour pressure	4932	EFAS GRIDS
Wind direction	6342	
Wind speed	11260	EFAS GRIDS + EFFIS

Active stations in CEMS-MDCC database (EFAS domain)

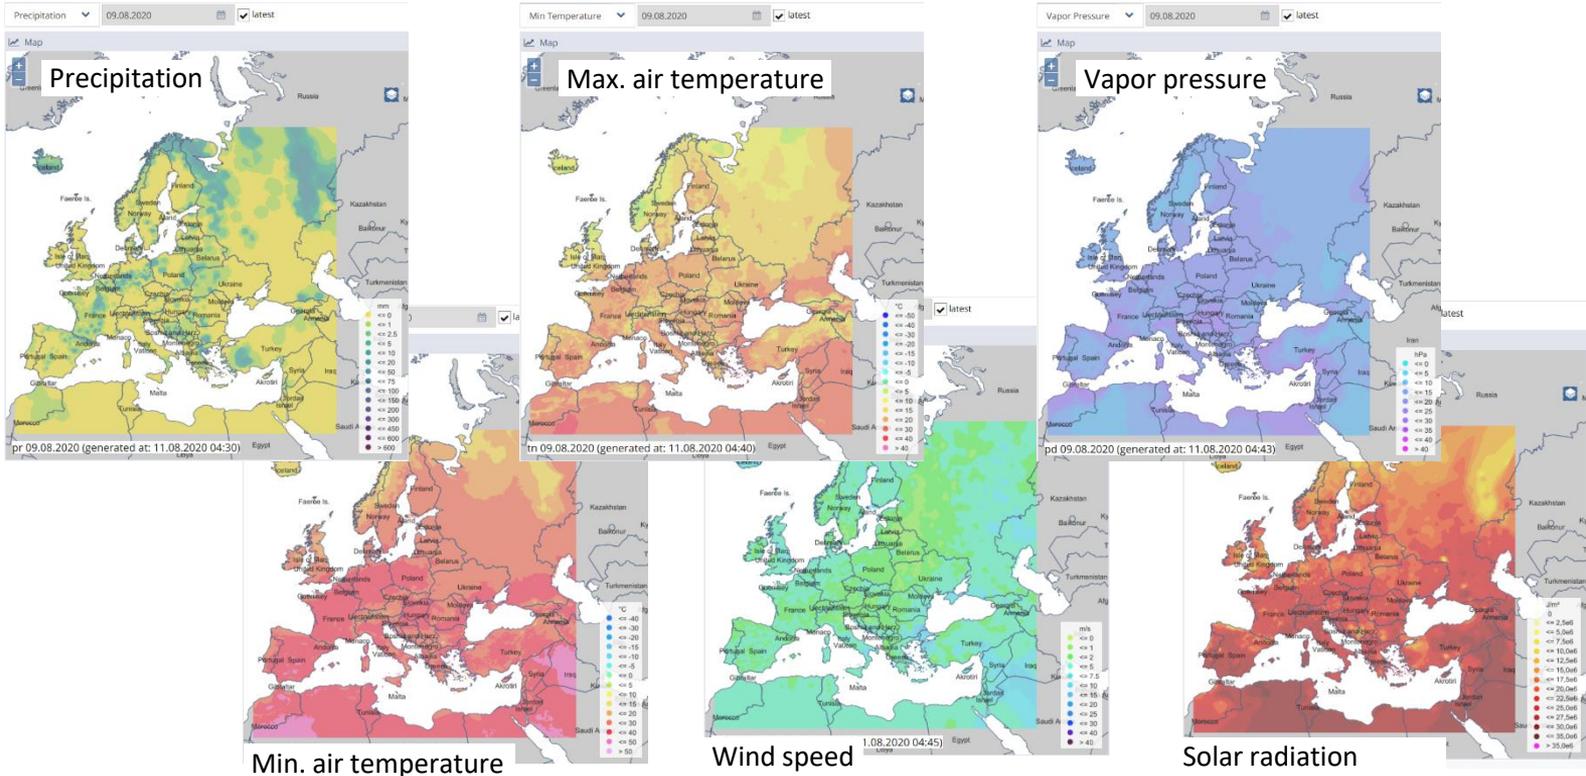

Number of stations:

- Total: 44641
- Active: 15459
 - thereof 1324 virtual stations
- Inactive: 29182
 - thereof 9308 virtual stations

Interpolated grids for LISFLOOD model

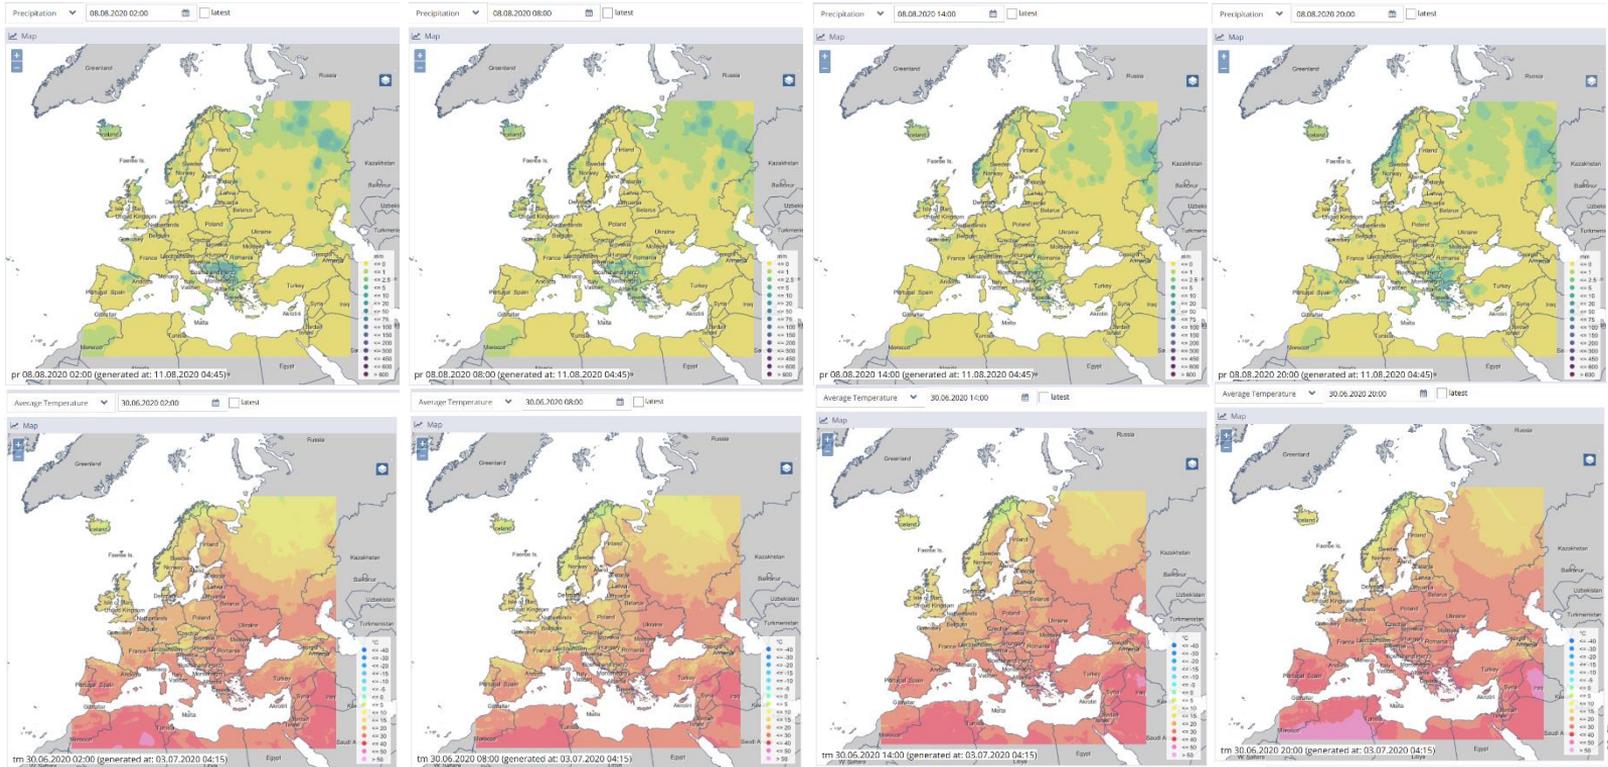

- Daily grids produced by CEMS-MDCC

Interpolated grids for LISFLOOD model

- 6-hourly precipitation and temperature grids produced by CEMS-MDCC

Recent Evolution

- Integration of new data providers
 - Agencia Estatal de Meteorología (AEMET, Spain)
 - Federal Hydrometeorological Institute (FHMZ, Bosnia-Herzegovina)
 - National Environmental Agency (LEPL, Georgia)
 - Royal Netherlands Meteorological Institute (KNMI, The Netherlands)
 - Swedish Meteorological and Hydrological Institute (SMHI, Sweden)

Emergency
Management

Recent Evolution

- Improvements in data processing to take changing reporting behaviour into account, e.g. precipitation observations from ‘odd’ dates: 12hourly aggregated at 3 UTC or 15 UTC (common 6 & 12 UTC) → make more data available for gridded products
- Data license for data providers who are not EUMETNET-members is now available

Ongoing and planned developments

- Avoid duplicate stations in grids
(same stations from different data providers, due to redundant data deliveries)
→ improving the quality of gridded data products
- Improve performance of grid creation
(faster pre- and post-processing, interpolation)
→ getting ready for future higher spatial resolution
(1.8 x 1.8 km² instead of 5 x 5 km²)

Ongoing and planned developments

- Integration of new data providers:
 - Confirmed:
 - Civil Protection Agency of the Lazio Region (Lazio/Italy, EFAS partner)
 - Hydrological Information Centre (Flanders /Belgium, EFAS partner)
 - Israel Meteorological Service (Israel)
 - Data request ongoing:
 - Országos Meteorológiai Szolgálat (Hungary)
 - MeteoFrance (France)

Ongoing and planned developments

- Integrate more parameters and stations from existing data providers, e.g.
 - solar radiation from DWDSynop FM94+FM12
 - DWDSynop WIGOS-ID stations in Israel
 - additional parameters available from ARPASIM in new open data portal
 - many more stations available from ARSO new data portal
- If you have additional meteorological observation data available:
Please contact us, we are looking forward to work with you !
